

The Bretton Woods Committee’s Artificial Intelligence work, a newly established analytical area, assesses the transformative potential of artificial intelligence (AI) in the global financial system and explore how these technologies can be harnessed responsibly to enhance efficiency, inclusion, and stability while managing significant new risks. The work aims to identify risks and governance gaps in existing frameworks, evaluate global regulatory and supervisory approaches, and promote responsible innovation through multilateral cooperation.

Generative AI and the Transformation of Risk Management and Compliance

RISK MANAGEMENT AND COMPLIANCE ARE AT THE FOREFRONT OF ENTERPRISE AI ADOPTION

Risk management compliance and enterprise AI adoption are experiencing rapid growth. The Bretton Woods Committee's new report, "Generative AI and the Transformation of Risk Management and Compliance," explores the challenges and opportunities of using generative AI in risk management and compliance. The report highlights the need for a robust framework to ensure the responsible use of generative AI in these areas.

These functions are prime candidates for generative AI, not simply because they are lower in risk but also because of how the tools are integrated. The use of generative AI in risk management and compliance is not limited to specific functions but encompasses a wide range of activities, including data analysis, document review, and regulatory reporting. The report discusses the challenges of integrating generative AI into existing risk management and compliance frameworks and provides recommendations for a successful implementation.

1. The report highlights the challenges of integrating generative AI into risk management and compliance frameworks. It discusses the need for a robust framework to ensure the responsible use of generative AI in these areas.

The Use of Generative AI to Provide Financial Advice: Opportunities and Risks

Artificial intelligence (AI) is rapidly advancing, and its use in providing financial advice is becoming increasingly common. The Bretton Woods Committee's new report, "The Use of Generative AI to Provide Financial Advice: Opportunities and Risks," explores the challenges and opportunities of using generative AI in financial advisory services. The report highlights the need for a robust framework to ensure the responsible use of generative AI in these services.

A comprehensive understanding of the opportunities and risks of using generative AI in financial advisory services is essential for regulators, investors, and consumers. The report discusses the challenges of integrating generative AI into existing financial advisory frameworks and provides recommendations for a successful implementation.

AI IN FINANCIAL ADVISORY SERVICES—PERSONALIZATION AND COMMUNICATION

Generative AI offers the potential to revolutionize financial advisory services by providing personalized and timely advice. The report discusses the challenges of integrating generative AI into existing financial advisory frameworks and provides recommendations for a successful implementation.

2. The report highlights the challenges of integrating generative AI into financial advisory frameworks. It discusses the need for a robust framework to ensure the responsible use of generative AI in these services.
